18.5-Ft Non-Walk-in Rescue
Spartan Gladiator Chassis**

Custom Built for Monroe Joint Fire District

This 18.5-Ft custom Non-Walk-In Rescue is designed to provide easy access to the tools you need when deployed at the incident site. The body contains nine (9) lower and four (4) roof compartments that have been configured to meet the customers specific needs with slide-out trays, adjustable shelves, three vertical slide-out tool boards, and a custom air bag rack. Additional features include a drawer cabinet with full width handles and lock-in / lock-out slides. Cargo netting in the lower compartments prevents stacked items from shifting and interfering with the roll-up doors. The second two compartments on each side provide access to electric cord reels and hose reels that are mounted on slide-out trays to extend the cords and hoses toward the outside of the body. The diamond plate wheel well area has storage for SCBA cylinders. The rear compartment provides extended depth of over 12-Ft of storage for long pike poles, storage shelves for folding ladders and a Stokes basket. A Will-Burt 17-Ft vertical LED light tower provides high intensity light to the primary area of focus.
