Custom Built for Alamance County Rescue Unit

24-Ft Non-Walk-in Heavy Rescue Body

Spartan Gladiator 20" Raised Cab/Chassis

Custom Heavy Rescue

This custom EVI Heavy Rescue Unit is built on a Spartan Gladiator 4-door cab/chassis with a 20" raised roof.

The modular all aluminum body provides (11) exterior storage compartments, (4) wheel well SCBA compartments, and a front extended bumper with an integrated tool compartment. The roof layout has a 36" wide walkway with an NFPA compliant diamond plate walking surface and provides access to (6) large roof equipment storage compartments that also house (2) Hannay electric cord reels and (2) Hannay electric air supply hose reels. The compartments are configured to meet the customers needs and secure their specific tools and equipment. The unit 120/220 volt system is powered by an on board 35kW PTO generator. There are numerous electrical outlets on both the exterior and interior of the body. The roof mounted Will-Burt NightScan light tower adds high power directional lighting to the unit to enhance the body mounted scene and flood light capabilities. A full warning light and siren package ensures the vehicle is seen and heard when deployed.
